✓ We should write unit tests on mocks to ensure they're implemented   *2/2
correctly.

○   of course

◉   oh, no   ✓

✓ For a given dependency, we could possibly have one mock per test, as   *2/2
necessary, with limited behavior or state to ensure the code passes the
test on hand.

◉   true   ✓

○   false

✓ There will be as many mocks as the number of tests we create. *   2/2

○   true

◉   false   ✓

✓ **To keep all the tests maintainable we should create only one mock for**   *2/2
   each dependency.

   ○ true

   ◉ false   ✓

✓ **When a test passes as soon as we write it: ***   2/2

   ☑ examine to ensure the test passed for the right reasons   ✓

   ☐ means the code is in great shape already

   ☐ it tells we're that awesome in writing tests

   ☑ it may mean the test is possibly wrong   ✓
